Experience

Grepsr.....

Backend Engineer(Python/Go) [March 2025 - Present]

- Designed and maintained scalable ETL workflows using microservices architecture and Temporal, ensuring reliable and fault-tolerant data pipelines.
- Implemented anomaly detection systems to identify inconsistencies in scraped data, significantly improving data quality and integrity.
- Developed monitoring and alerting mechanisms for long-running web crawlers, enabling early intervention and reducing infrastructure costs.

Adex International.....

Data Engineer(Python/Go) [October 2024 - March 2025]

- Played a key role in developing an automation tool for migrating Cognos reports to Power BI.
- Automated the migration of visuals, data models, and calculations from Cognos to Power BI.
- Reduced manual effort and improved accuracy in report migration through automation.
- Forked and analyzed the CloudQuery ETL tool and its AWS plugin to understand the codebase.
- Added new features to CloudQuery, including client-side rate limiting and event-based synchronization and created a destination plugin for opensearch.
- Integrated the customized CloudQuery tool into an existing FinOps product to enhance data processing workflows.
- Optimized ETL pipelines to improve data processing speed, reliability, and scalability.
- Built a DBT Core-like service for OpenSearch that enables users to define virtual indices by combining multiple physical indices, allowing seamless OpenSearch-native querying without modifying the original index.

Yarsa Labs.....

Game Developer (C#) [May 2023 - September 2024]

- Developed mobile games for Android and iOS platforms using C# and Unity game engine.
- Designed and implemented gameplay mechanics, ensuring engaging and responsive player experiences.
- Created user interfaces (UI) that are intuitive and visually appealing, enhancing overall game usability.
- Integrated monetization strategies, including ad networks, to optimize revenue generation.
- Utilized Firebase for remote config and analytics to tailor gameplay experiences and track user behavior.
- Collaborated with cross-functional teams to iterate and polish game features based on user feedback.
- Integrated Yarsa Play into games to manage profiles, stats, achievements, leaderboard and in-app purchases (IAP).

Skills

- **Programming Languages** : Python, Go, C#, C++

- **Data Engineering/Analytics** : Airflow, Kafka, IBM Cognos, PowerBI
- **Backend/Web** : Microservices, Temporal, GRPC, Grafana, Prometheus.
- **Database** : Postgres, Elasticsearch, MS-SQL, My-SQL
- **Cloud** : EC2, RDS, S3, Lambda, Bedrock, Kinesis, IBM DB2

PROJECTS

LLM Summary

- Created web api for text summarization using django rest framework.
- Used zero shot, one shot and few shot learning for text summarization using flan-t5 model
- Used Simple JWT for JWT authentication.
- Used inject module for dependency injection
- Link to repository <https://github.com/VectorTensor/LLM-Training.git>

Unity-ML

- Implemented Tensor class for multi dimensional array processing.
- Implemented CSV Parser for creating dataframe like pandas. It also has built in train test splitter to split the data into train and test set
- Implemented a saving system using Json to save model weights.
- Implemented confusion matrix and classification metrics for model evaluation.
- Performed unit testing using Nunit.
- Link to repository <https://github.com/VectorTensor/Unity-ML>

NLP library in C++

- Created logistic regression model for sentiment analysis
- Feature extraction using word frequencies. This created word vector dimension 3.
- Used xtensor library for multi dimensional array and CSVParser to parse CSV.
- Created system to serialize model as binary. Created both load and save system.
- Created unit tests for C++ using microsoft unit test framework.

EDUCATION

BE in Computer Engineering, Kantipur Engineering College(IOE)

Dhapakhel, Kathmandu [74.81%]

2018 - 2023

Certifications

I have various certifications on Data Engineering, Machine Learning and AWS. Check out my linked in Profile to view all the certifications <https://www.linkedin.com/in/prayash-thapa-a077051ab/>.

- **Data Warehouse Fundamentals**
- **ETL and Data Pipelines with Shell, Airflow and Kafka**
- **Convolutional Neural Networks**
- **Generative AI with Large Language Models**
- **Natural Language Processing with Classification and Vector Spaces**
- **Machine Learning with Python**
- **Applied Data Science Capstone**
- **AWS Academy Graduate - AWS Academy Cloud Foundations**
